

Green waste shredder service

Waste Flow

Organic waste (gardening waste)

Impact on PESTEL categories

Economic, Environmental, Technical

Location of the good practice

Pécs FA

Stakeholders involved

city of Pécs, local waste management company, households living in garden area

Keywords

Biodegradable, Sustainable, Waste reduction

Description

Nowadays, small garden households generate too much garden green waste, which is often incinerated by owners (at the same time polluting the air). (The home incineration of garden waste has become illegal since November, 2019, concerning the degree of local government of Pécs). Another problem is the large tree branches. It is hard to deliver them to the waste management sites or put them into the green waste trash bins. The most obvious solution is burning in the gardens (that is not allowed). The EIS provide shredder machines for rent for crushing green waste. Hence, large tree branches become easily compostable at home (or can be easily delivered to green trash bins). The machines can be rented from the operator (of the waste management company) with professional person on request.

Objective

Treatment of green waste generated in households (usually in suburbs). Prevent burning of green waste.
